Presenting math-only-math to kids, students and children. Mathematical ideas have been explained in the simplest possible way. Here you will have plenty of math help and lots of fun while learning. (R 2-12) WHA Quality Center Source: http://math.youngzones.org/stat_graph.html Using Graphs to Display Data Each type of graph has its advantages and disadvantages: The final part of the question asks us to construct a frequency polygon. This is nothing to worry about, all one must do is this: plot the frequency on the y-axis with the midpoint of each class on the x-axis, plot the smallest/largest values of weight on the x-axis at zero on the y-axis, and then join the points with straight lines. The shard key determines the distribution of the collection's documents among the cluster's shards. The shard key is either an indexed field or indexed compound fields that exists in every document in the collection. MongoDB partitions data in the collection using ranges of shard key values. Each range defines a non-overlapping range of shard key values and is associated with a chunk. - Explain Frequency Polygon
