If we define a "tree" as a single stemmed woody plant at least two metres tall, which is what most people would identify as a tree, then the oldest in Australia could be a Huon pine (*Lagarostrobos franklinii*) in Tasmania, the oldest stem of which is up to 2,000 years old.

Whatever our profession, forest trees of Australia can be excellent resource for reading. Discover the existing files of word, txt, kindle, ppt, zip, pdf, and rar in this site.

Information for this profile is drawn from Australia's State of the Forests Report 2013, and will be updated with information from Australia's State of the Forests Report 2018 in the near future..

Eucalypts are iconic Australian forest trees. Ninety-two million hectares of the Eucalypt forest type occurs in Australia, and forms three-quarters of the total native forest area.

Rainforest. Rainforests support a significant part of Australia's biodiversity, including many of Australia's unique plant families. The tropical rainforests in Far North Queensland are rich in marsupial, frog and butterfly species, while the cool-temperate rainforests of Tasmania support diverse fungi, mosses and lichens.
