An overview of the development and perspectives of biogas in and its use for electricity, heat and in transport. • Biogas upgrading to biomethane has started as an alternative to the direct use of biogas for heat and power. Agriculture is the science and art of cultivating plants and livestock. Agriculture was the key development in the rise of sedentary human civilization, whereby farming of domesticated species created food surpluses that enabled people to live in cities. The history of agriculture began thousands of years ago. After gathering wild grains beginning at least 105,000 years ago, nascent farmers ...Future of Agriculture. The future of farming is here. Whether that means a drone system, reporting every square meter of your fields, a soil sensor array allowing for continuous condition tracking, or a trait and herbicide developed and distributed in parallel to reduce losses right away, Bayer and Monsanto together will work to bring farmers the tools needed to maximize efficiency and profit. Modern history, the modern period or the modern era, is the linear, global, historiographical approach to the time frame after post-classical history. Modern history can be further broken down into periods: The early modern period began approximately in the early 16th century; notable historical milestones included the European Renaissance, the Age of Discovery, and the Protestant Reformation. - Modern Crop Protection Developments And Perspectives
