

Download New World Of Simulators : Training With Technology

A new, purpose built facility replicating real-life operations for Chinook helicopter crews with the very latest technology has been officially opened today. MINING MAGAZINE – NOVEMBER 2013 ThoroughTec Simulation – based in South Africa and with offices in Australia, Canada and Chile – offers its line of fourth generation CYBERMINE mining training simulators with a continuous 360° display and a high-resolution projection system for the classroom, as well as in mobile container units. A flight simulator is a device that artificially re-creates aircraft flight and the environment in which it flies, for pilot training, design, or other purposes. It includes replicating the equations that govern how aircraft fly, how they react to applications of flight controls, the effects of other aircraft systems, and how the aircraft reacts to external factors such as air density ...Simulation is extensively used for educational purposes. It is frequently used by way of adaptive hypermedia.. Simulation is often used in the training of civilian and military personnel. This usually occurs when it is prohibitively expensive or simply too dangerous to allow trainees to use the real equipment in the real world. - New World Of Simulators : Training With Technology
