Simple Techniques for Weathering Common Brick Buildings. By Daniel J. Heisey/photos by Douglas Sellers  
Necessity is indeed the mother of invention, especially when a model railroader wants to work out details mainly from scratch. COR-TEN® is high strength, low alloy weldable structural steel with exceptional weathering resistance. The chemical composition of the steel allows for the creation of a layer of rust that coats a building without altering the mechanical characteristics of the steel. This rust layer, not only protects architectural steel products against the elements, but also delivers a unique finish that ...Weathering Your Model Trains and Structures. Weathering your trains and structures is an important aspect of enhancing the realism of your model railroad. Western Red Cedar - Natural Weathering Leaving Timber to Weather Naturally. Even though timber weathers over time to an attractive silver-gray patina that has a certain architectural appeal, research chemists and wood scientists now recommend that some form of protective finish be applied to prevent surface degradation. - On Weathering The Life Of Buildings In Time
